

# Biofuse

FLEXIBLE COMFORT

We understand how important it is to feel comfortable. This is why we challenged our research and development team to create a goggle technology that puts your comfort first.

The result is Speedo Biofuse, a unique technology designed to achieve an experience so comfortable you could almost forget you're wearing goggles. Featuring soft and flexible materials that adapt to the shape of your face for cushioned comfort every time you swim.

Biofuse seal

### Super soft seals

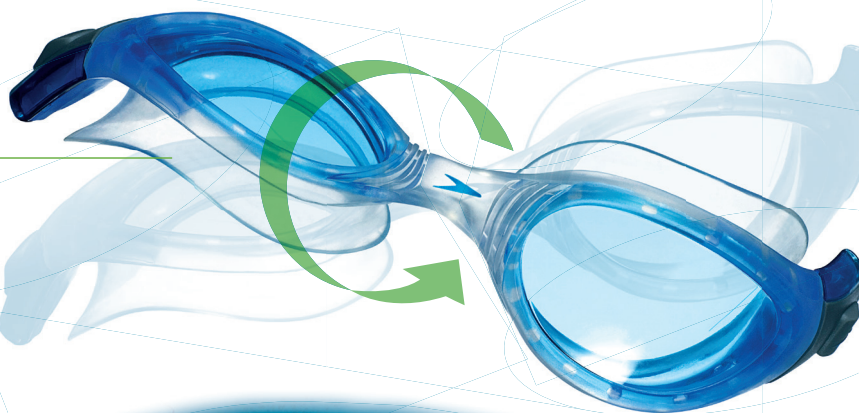

Because every face shape is unique, Speedo Biofuse goggles are designed with deeper, softer seals than traditionally used, enabling them to mould snugly to the contours of your eye.

Standard goggle seal

### Unparalleled comfort

Made with soft, gel-like materials, the flexible frame gently adapts to the shape of your face, delivering cushioned comfort every time you swim.

### Stability fit

The goggle's strong internal frame ensures stability on your face swim after swim.
