

John Lewis Glass

John Lewis Glass splashbacks and worktops are a stunning and durable design solution that offer timeless beauty and limitless creative opportunity.

Our superior toughened glass is popular for its design flexibility; worktops can span 1.2m without support and have no joins up to 3.2m. The choice of colours in Gloss or Frosted glass as well as Metallics and Standard Mirrors are available in bespoke designs; incorporating socket cut-outs, holes and other kitchen aesthetics. Artisan glass is available in all colours and metallics (excluding Standard Mirror).

Features

- We only use low iron, Opticlear glass which is completely transparent with no green tint
- Installed by experts, backed by a 12 month installation guarantee
- Non porous, therefore does not require any sealing or waxing
- Consistent in colour, giving little or no shade variances
- Very easy to clean and maintain, not requiring any specialist cleaning agents
- Stain and acid resistant
- At 400°C, our toughened glass is more heat resistant than many other work surfaces. This does not include Standard Mirror which cannot be toughened.

All products are quality assured with professional fitters carrying out installations guaranteed for 12 months. Our glass can be templated and installed anywhere in mainland UK.

Features and benefits

Range characteristics

Toughened glass available in a choice of over 60 colours.

Heat resistance

Resistant to temperatures up to 400°C, excluding Standard Mirror.

Water resistance

Non porous
