

LIVE OUTSIDE

24/7/365

Gloster's pioneering Outdoor Lounge cushion technology has been conceived, designed and engineered to be left outside all year round and in all weathers without any need to cover or protect.

Outdoor lounge collections feature cushions that are designed to be highly water resistant so no water can enter the cushion itself. In the unlikely case that any water does penetrate the outer cover, the construction of the cushion allows it to freely pass through the interior and exit underneath. Open mesh bases on the covers assist by aiding airflow within the cushion, further speeding up the drying process.

- A** Sewn upholstery outer cover in Leisuretex or Soft-Touch outdoor lounge fabric. Water resistant back coating and taped seams prevent water from entering the cushion.
- B** Breathable polyester interliner to retain the cushion interior.
- C** Layered (Dacron) polyester fibre wrap for a comfortable sit.
- D** Reticulated, quick-dry foam cushion core allows any water that may enter the cushion to pass through.
- E** Sling base on the underside of the outer covers allows water to completely exit the cushion.
- F** PVC sling base with perforations on frame aids comfort and allows water to drain away to the ground.
