Frequently Asked Questions (FAQ) ............ 44

Trouble shooting ....................................... 46
Read these instructions carefully. Please keep the instruction and installation manual, as well as the appliance certificate, in a safe place for later use or for subsequent owners.

Check the appliance after removing it from the packaging. If it has suffered any damage in transport, do not connect the appliance, contact the Technical Assistance Service and provide written notification of the damage caused, otherwise you will lose your right to any type of compensation.

This appliance must be installed according to the installation instructions included.

This appliance is intended for private domestic use and the household environment only. The appliance must only be used for the preparation of food and beverages. The cooking process must be supervised. A short cooking process must be supervised without interruption. Only use the appliance in enclosed spaces.

This appliance is intended for use up to a maximum height of 2000 metres above sea level.

Do not use covers. These can cause accidents, for example due to overheating, catching fire or materials shattering.

Only use safety devices or child protection grilles approved by ourselves. Unsuitable safety devices or child protection grilles may result in accidents.

This appliance is not intended for operation with an external clock timer or a remote control.

This appliance may be used by children over the age of 8 years old and by persons with reduced physical, sensory or mental capabilities or by persons with a lack of experience or knowledge if they are supervised or are instructed by a person responsible for their safety how to use the appliance safely and have understood the associated hazards.

Children must not play with, on, or around the appliance. Children must not clean the appliance or carry out general maintenance unless they are at least 15 years old and are being supervised.

Keep children below the age of 8 years old at a safe distance from the appliance and power cable.

When using the cooking functions, set the hotplate on which you have placed the saucepan with the temperature sensor.

We advise that you exercise caution using or standing near an induction hob while it is in operation, if you wear a pacemaker or a similar medical device. Consult your doctor or the device manufacturer concerning its conformity or any possible incompatibilities.
**Important safety information**

The appliance can only be used safely if it is correctly installed according to the safety instructions. The installer is responsible for ensuring that the appliance works perfectly at its installation location.

Only a licensed professional may connect appliances without plugs. Damage caused by incorrect connection is not covered under warranty.

Dangerous or explosive materials and vapours must not be extracted.

Ensure that no small parts or liquids get into the appliance.

Check the appliance for damage after unpacking it. Do not connect the appliance if it has been damaged in transport.

This appliance is not intended for operation with an external clock timer or a remote control.

**Warning – Danger of suffocation!**
Packaging material is dangerous to children. Never allow children to play with packaging material.

**Warning – Danger of death!**
Risk of poisoning from flue gases that are drawn back in.
Always ensure adequate fresh air in the room if the appliance is being operated in exhaust air mode at the same time as room air-dependent heat-producing appliance is being operated.

In combination with an activated vapour extractor hood, room air is extracted from the kitchen and neighbouring rooms - a partial vacuum is produced if not enough fresh air is supplied. Toxic gases from the chimney or the extraction shaft are sucked back into the living space.

- Adequate incoming air must therefore always be ensured.
- An incoming/exhaust air wall box alone will not ensure compliance with the limit.

Safe operation is possible only when the partial vacuum in the place where the heat-producing appliance is installed does not exceed 4 Pa (0.04 mbar). This can be achieved when the air needed for combustion is able to enter through openings that cannot be sealed, for example in doors, windows, incoming/exhaust air wall boxes or by other technical means.

In any case, consult your responsible Master Chimney Sweep. He is able to assess the house's entire ventilation setup and will suggest the suitable ventilation measures to you.

Unrestricted operation is possible if the vapour extractor hood is operated exclusively in the circulating-air mode.

**Warning – Risk of fire!**
- Hot oil and fat can ignite very quickly. Never leave hot fat or oil unattended. Never use water to put out burning oil or fat. Switch off the hotplate. Extinguish flames carefully using a lid, fire blanket or something similar.
- The hotplates become very hot. Never place combustible items on the hob. Never place objects on the hob.
- The appliance gets hot. Do not keep combustible objects or aerosol cans in drawers directly underneath the hob.
- The hob switches off automatically and can no longer be operated. It may switch on unintentionally at a later point. Switch off the circuit breaker in the fuse box. Contact the after-sales service.

Room air-dependent heat-producing appliances (e.g. gas, oil, wood or coal-operated heaters, continuous flow heaters or water heaters) obtain combustion air from the room in which they are installed and discharge the exhaust gases into the open air through an exhaust gas system (e.g. a chimney).
Important safety information

- Grease deposits in the grease filter may catch fire.
  **Clean the grease filter at least once a month.**
  Never operate the appliance without the grease filter.
- Fatty deposits in the filters may catch fire.
  Clean the appliance as described.
  Comply with the cleaning intervals. Never operate the appliance without the grease filter.
- When the ventilation system is switched on, fatty deposits in the grease filter may catch fire.
  Never work with naked flames close to the appliance (e.g. flambeing). Do not install the appliance near a solid fuel heating appliance (e.g. wood- or coal-burning) unless a sealed, non-removable cover is fitted. There must be no flying sparks.

⚠️ **Warning – Risk of burns!**
- The hotplates and surrounding area (particularly the hob surround, if fitted) become very hot. Never touch the hot surfaces. Keep children at a safe distance.
- The hotplate heats up but the display does not work. Switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Metal objects on the hob quickly become very hot. Never place metal objects (such as knives, forks, spoons and lids) on the hob.
- The filter cover will get very hot very quickly if left on the hob. Never place the filter cover on the hob. Do not place pots, pans or other hot objects on the filter cover.
- After each use, always turn off the hob at the main switch. Do not wait until the hob turns off automatically after the pan is removed.
- The accessible parts become very hot when in operation. Never touch hot parts. Keep children at a safe distance.
- The appliance will become hot during operation. If hot liquids penetrate the appliance, leave the appliance to cool for at least two hours before removing the filter cover, the metal grease filter, the container, the overflow reservoir or the appliance housing.

⚠️ **Warning – Risk of electric shock!**
- Incorrect repairs are dangerous. Repairs may only be carried out and damaged power cables replaced by one of our trained after-sales technicians. If the appliance is defective, unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Do not use any high-pressure cleaners or steam cleaners, which can result in an electric shock.
- A defective appliance may cause electric shock. Never switch on a defective appliance. Unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Cracks or fractures in the glass ceramic may cause electric shocks. Switch off the circuit breaker in the fuse box. Contact the after-sales service.

⚠️ **Warning – Electromagnetic hazards!**
- This appliance complies with safety and electromagnetic compatibility standards. However, people with pacemakers or insulin pumps must refrain from using this appliance. It is impossible to ensure that all of these devices available on the market comply with current electromagnetic compatibility standards, and that interference which may prevent the device from working correctly will not occur. It is also possible that people with other types of devices, such as a hearing aids, could experience some discomfort.
- The wireless temperature sensor is magnetic. The magnetic elements in it may damage electronic implants, e.g. pacemakers or insulin pumps. People fitted with electronic implants should therefore not carry the temperature sensor in their pockets and always keep it at least 10 cm away from their pacemaker or similar medical device.
Caution!
- Objects that are hard or sharp may damage the hob. Do not allow hard or sharp objects to fall on the hob.
- Heating cookware when empty may cause surface damage. Never leave empty cookware on the heat.
- Hot pots or pans may damage the hob. Never place hot pots or pans on the control panel, the displays/indicators, the hob surround or the filter cover.
- Never leave aluminium foil or plastic containers on hot hotplates as this may damage the hob. No not use oven liners.
- Risk of damage: Risk of breaking the filter cover. Take the filter cover off with care. Do not drop the filter cover.
- Using unsuitable cleaning products may cause surface damage, discoloration and stains. Only use cleaning products that are suitable for this type of hob.
- Friction from pots and pans may cause surface damage and discolouration. Always lift pots and pans up before repositioning them; do not slide them across the surface of the hob.
- Burnt-on food may cause surface damage and staining. Immediately remove any food that has boiled over using a glass scraper.
- Salt, sugar and sand may cause surface damage. Do not use the hob as a work surface or storage space.
- Using cookware with a rough base may cause surface damage. Check all cookware before use.
- Sugar and foods with a high sugar content may cause surface damage or conchoidal fracturing. Immediately remove any food that has boiled over using a glass scraper.
Environmental protection

In this section, you can find information about saving energy and disposing of the appliance.

Saving energy

- Always place suitable lids on saucepans. Cooking without a lid consumes significantly more energy. Use a glass lid so that you can see into the pan without having to lift the lid.
- Use pots and pans with flat bases. Uneven bases increase the energy consumption.
- The base diameter of pots and pans should be the same size as the hotplate. Please note: Cookware manufacturers often specify the diameter of the top of the saucepan, which is usually larger than the diameter of the base of the saucepan.
- Use small saucepans for small quantities. Using a large saucepan with little in it consumes a lot of energy.
- Cook with only a little water. This will save energy and preserve the vitamins and minerals in vegetables.
- Switch back to a lower heat setting in good time. This will save energy.
- During cooking, ensure that there is a sufficient supply of air to enable the ventilation system to work efficiently and with a low level of operating noise.
- Adjust the fan speed to the amount of steam produced during cooking. Only use intensive mode when required. The lower the fan speed, the less energy is consumed.
- If cooking produces large amounts of steam, select a higher fan speed in good time. If the cooking steam has already spread around the kitchen, the ventilation system will need to be operated for longer.
- Switch the appliance off when you are not using it.
- Clean and (if required) replace the filter at regular intervals in order to increase the effectiveness of the ventilation system and to prevent the risk of fire.

Environmentally-friendly disposal

Dispose of packaging in an environmentally-friendly manner.

This appliance is labelled in accordance with European Directive 2012/19/EU concerning used electrical and electronic appliances (waste electrical and electronic equipment - WEEE). The guideline determines the framework for the return and recycling of used appliances as applicable throughout the EU.

Induction cooking

Advantages of induction cooking

Induction cooking is very different from traditional cooking methods, as heat builds up directly in the item of cookware. This offers numerous advantages:

- Saves time when boiling and frying.
- Saves energy.
- Easier to care for and clean. Spilled food does not burn on as quickly.
- Heat control and safety – the hob increases or decreases the heat supply as soon as the user changes the setting. The induction hotplate stops the heat supply as soon as the cookware is removed from the hotplate, without having to switch it off first.

Cookware

Only use ferromagnetic cookware for induction cooking, such as:

- Cookware made from enamelled steel
- Cookware made from cast iron
- Special induction-compatible cookware made from stainless steel.

To check whether your cookware is suitable for induction cooking, refer to the section entitled "Cookware check".

To achieve a good cooking result, the ferromagnetic area on the base of the pan should match the size of the hotplate. If a hotplate does not detect an item of cookware, try placing it on another hotplate with a smaller diameter.

If the flexible cooking zone is being used as a single hotplate, larger items of cookware can be used as these are particularly suited to this area. You can find information on positioning cookware in the section entitled "Flex Zone" on page 18.
Some induction cookware does not have a fully ferromagnetic base:

- If the base of the cookware is only partially ferromagnetic, only the area that is ferromagnetic will heat up. This may mean that heat will not be distributed evenly. The non-ferromagnetic area may not heat up to a sufficient temperature for cooking.

- The ferromagnetic area will also be reduced if the material from which the base of the cookware is made contains aluminium, for example. This may mean that the cookware will not become sufficiently hot or even that it will not be detected.

**Unsuitable pans**

Never use diffuser hobs or pans made from:

- common thin steel
- glass
- earthenware
- copper
- aluminium

**Properties of the base of the cookware**

The material(s) from which the base of the cookware is made can affect the cooking result. Using pots and pans made from materials that distribute heat evenly through them, such as stainless-steel pans with a three-layer base, saves time and energy.

Use cookware with a flat base; if the base of the cookware is uneven, this may impair the heat supply.

**Empty pans or those with a thin base**

Do not heat empty pans, nor use pans with a thin base. The hob is equipped with an internal safety system. However, an empty pan may heat up so quickly that the "automatic switch off" function may not have time to react and the pan may reach very high temperatures. The base of the pan could melt and damage the glass on the hob. In this case, do not touch the pan and switch the hotplate off. If it fails to work after it has cooled down, please contact the Technical Assistance Service.

**Pan detection**

Each hotplate has a lower limit for pan detection. This depends on the diameter of the ferromagnetic area of the cookware and the material from which its base is made. For this reason, you should always use the hotplate that best matches the diameter of the base of the pan.

**Absence of pan or unsuitable size**

If no pan is placed on the selected hotplate, or if it is made of unsuitable material or is not the correct size, the power level displayed on the hotplate indicator will flash. Place a suitable pan on the hotplate to stop the flashing. If this takes more than 90 seconds, the hotplate will switch off automatically.
In this section, we will explain the indicators and controls. You will also find out about the various functions of your appliance.

**Your new appliance**

* in air recirculation mode only
** in air extraction mode only

**Special accessories**

- Air extraction set: HEZ381400
- Air recirculation set: HEZ381500
- Activated charcoal filter: HEZ381700

**Suitable cookware**

- 15 cm diameter frying pan: HZ390210
- 19 cm diameter frying pan: HZ390220
- 21 cm diameter frying pan: HZ390230

There are pans that are optimally suited for the frying sensor function. They can be purchased from specialist retailers or through our technical after-sales service. Always quote the relevant reference number.
The control panel

Touch controls
- Switch the appliance on and off
- Locking the control panel for cleaning/switching on the childproof lock
- Select a hotplate
- Set the heat settings/set the ventilation system
- Switch on the keep-warm function
- Activate automatic mode with sensor-controlled ventilation/activate the automatic function with sensor-controlled run-on
- Switch between the settings areas for the hob and the ventilation system/reset the saturation indicators
- Switch on the flexible cooking zone
- Activate the Move function
- Switch on the frying sensor
- Switch on the PowerBoost and ShortBoost functions for heat settings/switch on intensive mode for the ventilation system
- Programme the kitchen timer
- Set the cooking time
- Switch on the stopwatch function

Indicators/symbols
- Control panel locked for cleaning/childproof lock
- Operating status
- Heat settings/fan settings
- Residual heat
- Cooking functions
- Ventilation system
- Automatic mode for the ventilation system
- Flexible cooking zone
- Move function
- Frying sensor
- Intensive mode for the ventilation system
- Kitchen timer
- Set the cooking time
- Stopwatch function
- PowerBoost function

Indicators/symbols
- ShortBoost function
- Keep-warm function
- Temperature for cooking functions
- Timer function
- Time units on the timer
- Energy consumption
- Metal grease filter saturation indicator
- Activated charcoal filter saturation indicator

Controls
When the hob heats up, the symbols for the controls available at this time light up.
Touching a symbol activates the respective function.

Notes
- The corresponding symbols for the controls light up depending on whether they are available. The displays for the hotplates or the selected functions get brighter.
- Always keep the control panel clean and dry. Moisture can prevent it from working properly.
- Do not place any cookware near the indicators or sensors. The electronics could overheat.

Residual heat indicator
The hob has a residual heat indicator for each hotplate. This indicates that a hotplate is still hot. Do not touch a hotplate while the residual heat indicator is lit up.
The following indicators are shown depending on the amount of residual heat:
- Display $H$: High temperature
- Display $h$: Low temperature

If you remove the cookware from the hotplate during cooking, the residual heat indicator and the selected heat setting will flash alternately.
When the hotplate is switched off, the residual heat indicator will light up. Even after the hob has been switched off, the residual heat indicator will stay lit for as long as the hotplate is still warm.
Before using for the first time

Cooking sensor function (optional)
Depending on the appliance version, the temperature sensor will either be supplied with the appliance as a standard accessory or will be available to order as an optional accessory using the article no. below.

| Temperature sensor | HZ39050 |

Operating modes
This appliance can be used in exhaust-air mode or circulating-air mode.

Exhaust air mode
The air which is drawn in is cleaned by the grease filters and conveyed to the exterior by a pipe system.

Note: The exhaust air must not be conveyed into a functioning smoke or exhaust gas flue or into a shaft which is used to ventilate installation rooms which contain heat-producing appliances.

- Before conveying the exhaust air into a non-functioning smoke or exhaust gas flue, obtain the consent of the heating engineer responsible.
- If the exhaust air is conveyed through the outer wall, a telescopic wall box should be used.

Circulating-air mode
The air which is drawn in is cleaned by the grease filters and an activated carbon filter and conveyed back into the kitchen.

Note: To bind odours in circulating-air mode, you must install an activated carbon filter. The different options for operating the appliance in circulating-air mode can be found in the brochure. Alternatively, ask your dealer. The required accessories are available from specialist outlets, from customer service or from the Online Shop.

Initial use
Note: When it is delivered, the appliance is preset to air recirculation mode.
Possible settings:
- In air recirculation mode, if ' is displayed, the value ' (factory setting) is set.
- In air extraction mode, if ' is displayed, the value ' is set.

To switch the appliance to air extraction mode, see "Basic settings" on page 36.
Operating the appliance

This chapter explains how to set a hotplate. The table shows heat settings and cooking times for various meals.

⚠️ Warning – Risk of burns!
The filter cover will get very hot very quickly if left on the hob. Never place the filter cover on the hob. Do not place pots, pans or other hot objects on the filter cover.

Note: Switch on the ventilation system when you start cooking and switch it off again a few minutes after you have finished cooking. This is the most effective way of removing steam from the kitchen.

Note: Never use the appliance without the container, metal grease filter or filter cover.

Switching the hob on and off

The main switch is used to switch the hob on and off.

To switch on: Touch the symbol. An audible signal sounds. The symbols for the hotplates and the functions available at this time light up. The symbol lights up next to the hotplates. The hob is ready to use.

To switch off: Touch the symbol until the indicators go out. The residual heat indicator remains lit until the hotplates have cooled down sufficiently.

Notes
- The hob will automatically switch itself off if all hotplates have been switched off for more than 30 seconds and the ventilation system is off.
- The selected settings are stored for 4 seconds after the hob has been switched off. If you switch it back on during this time, the hob will operate using the stored settings.

Setting a hotplate

Set the required heat setting using the symbols.

Heat setting 1 = lowest setting.

Heat setting 9 = highest setting.

Every heat setting has an intermediate setting. This is marked in the control panel with the symbol.

Notes
- To protect the fragile parts of your appliance from overheating and electrical overloading, the hob may temporarily reduce the power.
- In order to prevent the appliance from producing excess noise, the hob may temporarily reduce the power.

Selecting a hotplate and heat setting

The hob must be switched on.

1. Touch the symbol for the required hotplate. The display gets brighter.
2. Then select the required heat setting from the settings range.

The heat setting is set.

Changing the heat setting

Select the hotplate and then set the required heat setting in the control panel.

Switching off the hotplate

Select the hotplate and set it to in the settings range. The hotplate switches itself off and the residual heat indicator appears.

Notes
- If no pan has been placed on the hotplate, the selected power level flashes. After a certain time has elapsed, the hotplate switches off.
- If a pan has been placed on the hotplate before switching on the hob, it will be detected within 20 seconds of pressing the main switch and the hotplate will be selected automatically. Once detected, select the power level within the next 20 seconds or the hotplate will switch off.
- If more than one pan is placed on the hob, only one will be detected when switching it on.
- The ventilation system must be switched off separately. → "Switching off the ventilation system" on page 14

Switching the ventilation system on and off

Note: Always adjust the setting according to the current conditions. To eliminate strong cooking smells, select a high fan setting.

Note: If no metal grease filter is available, the ventilation system cannot be switched on. Insert the metal grease filter. The hob functions are also available if there is no metal grease filter. → "Cleaning" on page 39

Note: Do not obstruct the ventilation openings. Do not place objects on the filter cover, as this will reduce the power of the ventilation system.

Note: Using tall items of cookware may prevent the extraction system from working at optimum power. The extraction power can be improved by placing a lid on the cookware at an angle.
Switching on the ventilation system

**Note:** If the \( \text{A} \) and \( \text{A} \) symbols are not available, insert the metal grease filter correctly. *Cleaning* on page 39

The \( \text{A} \) and \( \text{A} \) symbols are available. The ventilation system can be switched on.

1. Touch the \( \text{A} \) symbol.
   The ventilation system starts at power level \( \text{A} \). The power level that is set is displayed in the settings area.

**Notes**
- Heat settings cannot be changed while the ventilation system power level is being set.
- During a period of a few seconds, a power level for the ventilation system can be selected. The settings area can then be used for the heat settings again.

2. Select the required power level from the settings area.
   The power level that is selected is displayed in the settings area.

3. To set a different power level, touch the \( \text{A} \) symbol and select the required power level from the settings area.
   The power level that is selected is displayed in the settings area.

Switching off the ventilation system

If you want to switch off the appliance, touch the \( \text{A} \) symbol. If you only want to switch off the ventilation system, proceed as follows:

1. Touch the \( \text{A} \) symbol.
2. Select the \( \text{A} \) symbol in the settings area.
3. Touch the \( \text{A} \) symbol to switch to the setting area for the hob.

**Note:** The run-on will start once the appliance has been switched off (depending on the basic settings selected).

Intensive setting

Activate intensive mode if strong odours or large amounts of steam are produced. In this mode, the ventilation system briefly operates at maximum power. It automatically switches back to a low setting after a short time.

**Switching on**

1. Touch the \( \text{A} \) symbol.

2. Touch the \( \text{A} \) symbol.

The \( \text{A} \) symbol lights up brighter and the line above the \( \text{A} \) symbol lights up. Intensive mode is now activated.

**Note:** After eight minutes, the appliance automatically switches back to fan setting \( \text{G} \).

**Note:** After a few seconds, the settings area for the heat settings will be displayed again.

**Switching off**

1. Touch the \( \text{A} \) symbol.

2. Slide your finger over the settings area until setting \( \text{G} \) or another setting is displayed.

Automatic start

Depending on the basic settings selected, the following options will be available once you have selected the fan setting for a cooking zone:

- The ventilation system will not start.
- The ventilation system will start at the fan setting selected by the sensor.
- The ventilation system will start at a specified fan setting.

Select the option you want to use in the basic settings. The basic settings also offer the option to adjust the sensitivity of the sensor. *Basic settings* on page 36.
Automatic mode with sensor control

Switching on
1. Touch the symbol.
2. Touch the symbol.
   The optimum power level is set automatically using a sensor. The line above the symbol lights up brighter.

Switching off
Touch the symbol.
The line above the symbol is not longer lit. Automatic mode with sensor control is switched off.

Note: The ventilation system will run at the fan setting set by the sensor.

Run-on function
The run-on function leaves the ventilation system running for a few minutes after it has been switched off. This eliminates any remaining cooking smells. The ventilation system will switch off automatically afterwards.

In the basic settings, you can select the following options for the run-on:

- Deactivate the run-on
- Activate the automatic function with sensor-controlled run-on
- Activate the run-on for a fixed period at a fixed fan setting

Note: The run-on function will only switch on if at least one cooking zone has been switched on for at least 1 minute.

If the automatic function with sensor-controlled run-on has been activated, the symbol and the line above the symbol will be lit during the run-on period.

Switching off
Touch the or symbol.
This will deactivate the run-on function immediately.

If one of the following conditions is present, the run-on function is switched off:

- The run-on time has expired.
- The appliance is switched on again.
- When the automatic function is activated with a sensor-controlled run-on, the sensor determines a corresponding room-air quality level.

Chef’s recommendations

Recommendations

- When heating up puree, cream soups and thick sauces, stir occasionally.
- Set heat setting 8 to 9 for preheating.
- When cooking with the lid on, turn the heat setting down as soon as steam escapes between the lid and the cookware. Steam does not need to escape for a good cooking result.
- After cooking, keep the lid on the cookware until you serve the food.
- To cook with the pressure cooker, observe the manufacturer's instructions.
- Do not cook food for too long, otherwise the nutrients will be lost. The kitchen clock can be used to set the optimum cooking time.
- For a more healthy cooking result, smoking oil should be avoided.
- To brown food, fry small portions in succession.
- Cookware may reach high temperatures while the food is cooking. We recommend that you use oven gloves.
- You can find recommendations for energy-efficient cooking in section "Environmental protection"
Cooking table
The table shows which heat setting is suitable for each type of food. The cooking time may vary depending on the type, weight, thickness and quality of the food.

<table>

Flex Zone

You can use each flex zone as a single hotplate or as two independent hotplates, as required.
It consists of four inductors that work independently of each other. If using the flexible cooking zone, only the area that is covered by cookware is activated.

Advice on using cookware

To ensure that the cookware is detected and heat is distributed evenly, correctly centre the cookware:

As a single hotplate

- **Diameter smaller than or equal to 13 cm**
  - Place the cookware on one of the four positions that can be seen in the illustration.

- **Diameter greater than 13 cm**
  - Place the cookware on one of the three positions that can be seen in the illustration.

- If the cookware takes up more than one hotplate, place it starting on the upper or lower edge of the flexible cooking zone.

As two independent hotplates

- The front and rear hotplates each have two inductors and can be used independently of each other. Select the required heat setting for each of the hotplates. Use only one item of cookware on each hotplate.

As two independent hotplates

- The flexible cooking zone is used like two independent hotplates.

Activating

See section → "Operating the appliance"
Move function

This function activates the entire flexible cooking zone, which is divided into three cooking areas and which has preset heat settings.

Only use one item of cookware. The size of the cooking area depends on the cookware used and whether it is positioned correctly.

**Cooking areas**

This means that an item of cookware can be moved during the cooking process to another cooking area with another heat setting:

Preset heat settings:
- Front area = heat setting 9
- Middle area = heat setting 5
- Rear area = heat setting 1.5

The preset heat settings can be changed independently of one another. You can find out how to change these in the section on "Basic settings".

**Notes**
- If more than one item of cookware is detected on the flexible cooking zone, the function is deactivated.
- If the cookware is moved within the flexible cooking zone or lifted up, the hob automatically starts searching and the heat setting of the area in which the vessel was detected is set.
- You can find information on the size and positioning of the cookware in the section on "Flex Zone".

**Activation**

1. Select one of the two hotplates in the flexible cooking zone.
2. Touch the symbol. The indicator beside the symbol lights up. The flexible cooking zone is activated as a single hotplate. The heat setting in the area in which the cookware is located lights up in the hotplate display. The function has now been activated.

**Changing the heat setting**

The heat settings for the individual cooking areas can be changed during the cooking process. Set the cookware down on the cooking area and change the heat setting in the settings range.

**Notes**
- Only the heat setting in the area in which the cookware is located is changed.
- If the function is deactivated, the heat settings for the three cooking areas are reset to the preset values.

**Deactivating**

Touch the symbol. The indicator beside the symbol goes out. The function was deactivated.

**Note:** If one of the cooking areas is set to 0, the function deactivates after a few seconds.
Time-setting options

Your hob has three timer functions:

- Programming the cooking time
- Kitchen timer
- Stopwatch function

Programming the cooking time

The hotplate automatically switches off after the time that is set has elapsed.

Setting procedure:

1. Select the hotplate and the required heat setting.
2. Touch the symbol. The symbol and the indicator light up in the timer display.
3. Within the next 10 seconds, set the required cooking time in the settings range.
4. Touch the symbol to confirm the selected setting.

The cooking time begins to elapse.

Notes

- The same cooking time can be set automatically for all hotplates. The set time for each of the hotplates counts down independently. You can find information on automatically programming the cooking time in section → "Basic settings".
- If the flexible cooking zone is selected as the only hotplate, the set time for the entire cooking zone is the same.
- If the Move function is selected for the combined hotplate, the set time for the three hotplates is the same.

Frying sensor

If a cooking time has been programmed for a hotplate and the frying sensor has been activated, the cooking time will not begin to count down until the selected temperature setting has been reached.

Cooking functions

If a cooking time has been programmed for a hotplate and one of the cooking functions has been activated, the set cooking time will not start to count down until the temperature for the selected area has been reached.

Changing or deleting the time

Select the hotplate and then touch the symbol.

Change the cooking time in the settings range or set to delete the programmed cooking time.

Touch the symbol to confirm the selected setting.

When the time has elapsed

The hotplate switches off, the display flashes and the hotplate switches to the heat setting. An audible signal sounds.

and the indicator flash in the timer display.

When the symbol is touched, the indicators go out and the acoustic signal ceases.

Notes

- To set a cooking time of under 10 minutes, always touch before you select the required value.
- If a cooking time was programmed for several hotplates, the time information for the selected hotplate is shown in the timer display.
- Select the relevant hotplate to call up the remaining cooking time.
- You can set a cooking time of up to minutes.

The kitchen timer

You can use the kitchen timer to set a time of up to 99 minutes.

This functions independently from the hotplates and from other settings. This function does not automatically switch off a hotplate.

Setting procedure

1. Touch the symbol. The symbol and the indicator light up in the timer display.
2. Select the required time on the control panel and touch the symbol to confirm.

After a few seconds, the time begins to elapse.

Changing or deleting the time

Touch the symbol.

Change the cooking time in the settings range or set to delete the programmed cooking time.

Touch the symbol to confirm the selected setting.
When the time has elapsed
An audible signal sounds once the time has elapsed. 
 and the symbol flash in the timer display.
The indicators go out after touching the symbol.

Stopwatch function
The stopwatch function displays the time that has elapsed since activation.
This function independently from the hotplates and from other settings. This function does not automatically switch off a hotplate.

Activating
Touch the symbol. The symbol and the indicator light up in the timer display.
The cooking time begins to elapse.

Deactivating
Touching the symbol stops the stopwatch function. The timer displays remain lit.
If you touch the symbol again, the displays go out. The function is deactivated.

PowerBoost function
The PowerBoost function enables you to heat up large quantities of water faster than when using heat setting .
This function can always be activated for a hotplate, provided the other hotplate in the same group is not in use (see illustration).

Note: The PowerBoost function can also be activated in the flexible area if the cooking zone is being used as a single hotplate.

Activating
1. Select a hotplate.
2. Touch the symbol.
   The indicator lights up.
The function is activated.

Deactivating
1. Select a hotplate.
2. Touch the symbol.
   The indicator will go out and the hotplate will switch back to heat setting .
This function has now been deactivated.

Note: In certain circumstances, the PowerBoost function can switch itself off automatically in order to protect the electronic elements inside the hob.
ShortBoost function

The ShortBoost function enables you to heat cookware faster than when using heat setting $9$.

After deactivating the function, select the appropriate heat setting for your food.

This function can always be activated for a hotplate, provided the other hotplate in the same group is not in use (see illustration).

**Note:** With the flexible cooking zone, the ShortBoost function can be activated even if it is used as the only cooking zone.

Recommendations for use

- Always use cookware that has not been pre-heated.
- Use pots and pans with a flat base. Do not use cookware with a thin base.
- Never leave empty cookware, oil, butter or lard to heat up unattended.
- Do not place a lid on the cookware.
- Place the cookware on the centre of the hotplate. Ensure that the diameter of the base of the cookware corresponds to the size of the hotplate.
- You can find information on the type, size and positioning of the cookware in section "Induction cooking".

Activating

1. Select a hotplate.
2. Touch the $\text{□}$ symbol twice.
   - The $\text{□}$ indicator lights up.
   - The function is activated.

Deactivating

1. Select a hotplate.
2. Touch the $\text{□}$ symbol.
   - The $\text{□}$ display goes out and the hotplate switches back to heat setting $9$.
   - The function is deactivated.

**Note:** After 30 seconds, this function will automatically switch off.

---

Keep warm function

This function is suitable for melting chocolate or butter and for keeping food warm.

Activating

1. Select the required heat setting.
2. Within the next 10 seconds, touch the $\text{□}$ symbol.
   - The $\text{□}$ indicator lights up.
   - The function is activated.

Deactivating

1. Select a hotplate.
2. Touch the $\text{□}$ symbol.
   - The $\text{□}$ display goes out. The hotplate switches itself off and the residual heat indicator appears.
   - The function is deactivated.

---

Induction cooking
Transferring settings

This function can be used to transfer the heat setting, the programmed cooking time and the selected cooking function from one hotplate to another.

To transfer the settings, move the cookware from the hotplate which is switched on to another hotplate.

Note: You can find additional information on the positioning of the cookware in the section on "Flex Zone"

Activation

1. Move the cookware from the hotplate which is switched on to another hotplate.
   The heat setting of the original hotplate flashes.
   The cookware is detected and the previously selected heat setting and the £ symbol flash in the new hotplate display.
2. Select the new hotplate to confirm the settings.
   The heat setting of the original hotplate is set to \( \text{OFF} \).

The settings have been transferred to the new hotplate.

Notes

- Move the cookware to a hotplate which is not switched on, which you have not yet preset or on which no other cookware has been placed.
- The PowerBoost or ShortBoost function can then only be moved from left to right or right to left if no hotplate is active.
- If a new item of cookware is set down on another hotplate before the settings have been confirmed, this function is ready for both cooking vessels.
- If several vessels are moved, the function is only ready for the vessel which was last moved.
Cooking assist functions

The cooking assistance functions make cooking easy and always give you excellent results. The recommended temperature settings are suitable for any type of cooking. They enable you to cook without using excessive heat and promise the perfect cooking and frying results. Sensors measure the heat of the saucepan or frying pan throughout the cooking process. This ensures that the power is continuously controlled and that the right temperature is maintained. Food can be added once the selected temperature has been reached. Food will not be overheated and liquids will not boil over.

The hotplates that have a frying sensor are marked with the frying sensor symbol.

</tr>
</tbody>
</table>

*Preheat with the lid on and fry with the lid off.

If the hob does not have a wireless cooking sensor, this can be purchased from specialist retailers, our after-sales service or our official website.

### Suitable cookware

Select the cooking zone with the diameter that most closely matches that of the base of the cookware and place the cookware in the centre of this cooking zone. For the cooking functions, use cookware that is high enough that the required water volume lies above the silicone patch for the wireless sensor. There are frying pans that are perfect for using with the frying sensor. These can be purchased from specialist retailers, our technical after-sales service or our official website. Quote the relevant reference number:

- HEZ390210 15 cm frying pan.
- HEZ390220 19 cm frying pan.
- HEZ390230 21 cm frying pan.

These frying pans have a non-stick coating so that you require only a small amount of oil to fry food.

### Notes

- The frying sensor has been configured specifically for this type and size of frying pan.
- Using a frying pan of a different size or one that is poorly positioned on the flexible cooking zones may result in the frying sensor not being activated. See section "Flex Zone".
- Other types of frying pan may overheat and reach a temperature above or below the selected heat setting. Try the lowest temperature setting to begin with and change it if required.
Any cookware that is suitable for induction cooking can be used with the cooking functions. You can find information on which types of cookware can be used with an induction hob in section → "Induction cooking".

The cooking assistance functions table lists which cookware is suitable for which functions.

**Sensors and special accessories**

The sensors measure the temperature of the pot throughout the entire cooking process. This ensures that the cooking power is controlled with high precision to maintain the correct temperature and achieve optimum cooking results.

Your hob has two different temperature-measuring systems for achieving the best results:

- Temperature sensors that are located inside the hob and monitor the temperature of the base of the cookware. Suitable for the frying sensor.
- A wireless cooking sensor that transmits information about the temperature of the cookware to the control panel. Suitable for the cooking functions.

The cooking sensor is essential for using the cooking functions.

If your hob does not have a wireless cooking sensor, this can be purchased from specialist retailers, our technical after-sales service or our official website by quoting the reference number HEZ39050.

You can find information about the cooking sensor in section → "Preparing and maintaining the wireless temperature sensor"

**Temperature settings**

<table>
<thead>
<tr>
<th>Temperature level</th>
<th>Suitable for</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>very low Prepares and reduces sauces, stewing vegetables and frying food in extra virgin olive oil, butter or margarine.</td>
</tr>
<tr>
<td>2</td>
<td>low Frying food in extra virgin olive oil, butter or margarine, e.g. omelettes.</td>
</tr>
<tr>
<td>3</td>
<td>medium - low Frying fish and thick food such as meatballs and sausages.</td>
</tr>
<tr>
<td>4</td>
<td>medium - high Frying steaks (well done), breaded frozen products, and thin food such as schnitzel, strips of meat and vegetables.</td>
</tr>
<tr>
<td>5</td>
<td>high Frying food at high temperatures, e.g. rare steaks (rare or medium), potato fritters and fried potatoes.</td>
</tr>
</tbody>
</table>

**Setting procedure**

Select the appropriate temperature level from the table. Set an empty item of cookware down on the cooking zone.

1. Select the hotplate. Touch the $\text{\textael}$ symbol. $\text{\textael}$ lights up in the hotplate display.

2. Within the next 10 seconds, select the required temperature setting from the settings range.

The function has now been activated. The temperature symbol $\text{\textael}$ will flash until the frying temperature is reached. An audible signal will sound and the temperature symbol will stop flashing.
3. Once the frying temperature has been reached, add
the fat and then the food to the pan.

Note: Turn the food so that it does not burn.

Switching off the frying sensor
Select the hotplate and set it to \( \sigma, \sigma \) in the settings
range. The hotplate switches itself off and the residual
heat indicator appears.

Cooking functions
You can use these functions to heat, simmer or cook
food, or cook it in a pressure cooker or fry it in a
saucepan with sufficient oil at a controlled temperature.
These cooking functions are available for all hotplates.

Benefits
- The cooking zone only continues heating for as long
  as this is necessary to maintain the temperature.
  This saves energy and prevents oil or fat from
  overheating.
- The temperature is continuously monitored. This
  prevents the food from spilling over. In addition, the
  temperature setting does not need to be changed.
- A signal sounds once the water or oil has reached
  the optimum temperature for adding the food. The
  table shows if the food needs to be added right at
  the start.

</tbody>
</table>

Tips for cooking with the cooking functions
- Heating/keep-warm function: Frozen products in
  portions, e.g. spinach. Place the frozen product in
  the cookware. Pour in the volume of water specified
  by the manufacturer. Cover the cookware and select
  the setting 1/70 °C. Stir occasionally.
- Poaching function: This function is suitable for
  cooking food at low temperatures and for thickening
  sauces and stews. Select setting 2/90 °C.
- Boiling function: This function allows you to boil
  water with a lid without it boiling over. You can boil
  efficiently thanks to the temperature control. Select
  setting 3/100 °C.
- Cooking in a pressure cooker function: Follow the
  manufacturer's recommendations. Continue cooking
  for the recommended time once the signal has
  sounded. Select setting 4/120 °C.
- Frying with a large amount of oil in the saucepan
  function: To heat the oil with the lid on. Remove the
  lid after the signal tone and add the food (insofar as
  there are no other instructions in the "Recommended
  dishes" table). Select setting 5/170 °C.

Notes
- Use pots and pans with a thick, flat base. Do not use
  pots and pans with a thin or domed base.
- Fill the pot so that the contents reach high enough to
  cover the cooking sensor's silicone patch.
- Use the frying sensor when frying with a small
  amount of oil.
- Position the cookware in such a way that the
  cooking sensor is pointing towards the outer side of
  the hob.
- Do not remove the cooking sensor from the pot
  during cooking.
- Remove the cooking sensor from the pot after
  cooking. Be careful as the cooking sensor may be
  very hot.
- Always cook with the lid on. Exception: "Frying with a
  large amount of oil in the saucepan", temperature
  setting 5/170 °C.
- If an audible signal does not sound, make sure that
  the lid is on the pan.
- Never leave oil unattended during heating. Use oil or
  fat that is suitable for frying. Do not mix different
  cooking fats together, e.g. oil and lard. Mixtures of
  different fats may froth up when hot.
- If you are not satisfied with the cooking result, e.g.
  when cooking potatoes, next time use less water but
  keep the recommended temperature setting.
Setting the boiling point

The point at which water starts to boil depends on the height of your home above sea level. You can set the boiling point if water is boiling too strongly or not strongly enough. To do this, proceed as follows:

- Select the basic setting 3; see the section on "Basic settings"
- The basic setting is 3 as standard. If your home is between 200 and 400 metres above sea level, there is no need to set the boiling point. If not, choose the correct setting from the following table according to your altitude:

<table>
<thead>
<tr>
<th>Height</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - 100 m.</td>
<td>1</td>
</tr>
<tr>
<td>100 - 200 m.</td>
<td>2</td>
</tr>
<tr>
<td>200 - 400 m.</td>
<td>3*</td>
</tr>
<tr>
<td>400 - 600 m.</td>
<td>4</td>
</tr>
<tr>
<td>600 - 800 m.</td>
<td>5</td>
</tr>
<tr>
<td>800 - 1000 m.</td>
<td>6</td>
</tr>
<tr>
<td>1000 - 1200 m.</td>
<td>7</td>
</tr>
<tr>
<td>1200 - 1400 m.</td>
<td>8</td>
</tr>
<tr>
<td>Above 1400 m.</td>
<td>9</td>
</tr>
</tbody>
</table>

* Basic setting

Note: Temperature setting 3/100 ºC is sufficient for efficient boiling, even if the water does not boil very strongly. However, the boiling point can be changed. For example, you can set a lower altitude if you want the water to boil more strongly.

Connecting the wireless temperature sensor to the control panel

You will need to connect the wireless temperature sensor to the control panel before using the cooking functions for the first time.

To connect the wireless temperature sensor to the control panel, follow the instructions below:

1. Select the menu; see the section on "Basic settings"
2. Select the hotplate and its indicator will light up. A signal will sound. The indicator will light up.
3. Press the symbol on the wireless temperature sensor within 30 seconds. After a few seconds, the status of the connection between the temperature sensor and the control panel will appear on the hotplate’s display.

Status

<table>
<thead>
<tr>
<th>Status</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Connected correctly</td>
</tr>
<tr>
<td>!</td>
<td>Not connected correctly: Transmission error.</td>
</tr>
<tr>
<td>$</td>
<td>Not connected correctly: Temperature sensor fault.</td>
</tr>
</tbody>
</table>

The cooking functions are made available once the temperature sensor has been connected to the control panel correctly.

If there is a fault with the temperature sensor, the connection may not be established correctly for the following reasons:
- Bluetooth communication error.
- You did not press the symbol on the temperature sensor within 30 seconds of selecting a hotplate.
- The battery in the temperature sensor has run out.

Reset the wireless temperature sensor and follow the connection procedure once again.

If the temperature sensor and the control panel are not connected correctly due to a transmission error, follow the connection procedure once again. If the display continues to show incorrect connection '!', contact our technical after-sales service.

Resetting the wireless temperature sensor

1. Touch and hold the symbol for approximately 8-10 seconds.
   While you are doing this, the temperature sensor’s LED indicator will light up three times. When the LED lights up for the third time, it will start to reset the temperature sensor. At this point, you will need to lift your finger off the symbol. Once the LED goes out, this means that the wireless temperature sensor has been reset.
2. Repeat the connection procedure from point 2.

Setting procedure

1. Attach the temperature sensor to the saucepan; see the section on "Preparing and maintaining the wireless temperature sensor"
2. Place a saucepan filled with sufficient liquid on the required hotplate and always put the lid on.
3. Select the hotplate on which you have placed the saucepan with the temperature sensor.
4. Touch the symbol on the temperature sensor. The indicator will light up in the control panel.

800 - 1000 m. 6
1000 - 1200 m. 7
1200 - 1400 m. 8
Above 1400 m. 9
5. Select the right temperature setting from the table.

The function has now been activated. The temperature symbol will flash until the water or oil has reached the right temperature for adding the food. A signal will sound and the temperature symbol will stop flashing.

6. Once the signal has sounded, take the lid off and add the food. Keep the lid on during cooking.

**Note:** Do not cover the pan when using the "Frying with a large amount of oil in the saucepan" function.

### Switching off cooking functions

Select the hotplate and set it to on the control panel. The hotplate will switch off and the residual heat indicator will appear.

**Note:** To re-activate the cooking functions, wait for approximately 10 seconds.

### Recommended dishes

The following table shows a selection of dishes and is arranged by food type. The temperature and the cooking time depend on the amount, the condition and the quality of the food.

Preparing and maintaining the wireless temperature sensor

This section provides information on:

- Adhering the silicone patch
- Attaching the wireless cooking sensor
- Cleaning
- Changing the battery

The silicone patch and the cooking sensor can be purchased at a later time from specialist retailers, our technical after-sales service or our official website. To do this, quote the relevant reference number:

00577921  Set of 5 silicone patches
HEZ39050  Cooking sensor and set of 5 silicone patches

Adhering the silicone patch

The silicone patch attaches the temperature sensor to the cookware.

When a pan is used for the first time with the cooking functions, the silicone patch must be adhered directly to the pan. It is important

1. that the adhesive area on the pan is free from grease. Clean the pan, dry it thoroughly and wipe the adhesive area with a spirit.
2. Remove the protective film from the silicone patch. Adhere the silicone patch to the outside of the pan in the correct place using the enclosed template as a guide.
3. Press down all over the surface of the silicone patch, including in the centre. The adhesive requires one hour to fully harden. Do not use or clean the pan during this time.

Notes

- Do not leave the pan with the silicone patch to soak soapy water for long periods of time.
- If the silicone patch comes off, attach a new one.

Fitting the wireless temperature sensor

Attach the temperature sensor to the silicone patch and align it correctly.

Notes

- Make sure that the silicone path is completely dry before attaching the temperature sensor.
- Position the cookware in such a way that the temperature sensor is pointing towards the outer side of the hob.
- To prevent overheating, the temperature sensor must not be pointed towards another item of cookware that is hot.
- Remove the temperature sensor from the saucepan after cooking. Store it in a clean, safe place away from sources of heat.

Cleaning

Do not clean the wireless temperature sensor in the dishwasher.

You can find information on cleaning the temperature sensor in the section on "Cleaning*"

Changing the battery

If the temperature sensor does not light up when the symbol is pressed, the battery is flat.

Changing the battery:

1. Remove the silicone cover from the lower section of the temperature sensor housing and remove both screws using a screwdriver.
2. Open the closure of the temperature sensor. Remove the battery from the lower section of the housing and insert a new battery (pay attention to the correct orientation of the battery poles).

! Caution!
Do not use any metal objects to remove the battery. Do not touch the battery connection points.

3. Close the closure of the temperature sensor (the notches for the screws on the closure must align with the notches on the lower section of the housing). Tighten the screws with a screwdriver.

4. Reattach the silicone cover to the lower section of the temperature sensor housing.

Note: Use only high-quality batteries of the type CR2032 in order to guarantee a long service life.

Declaration of Conformity
Robert Bosch Hausgeräte GmbH hereby declares that the appliance with wireless temperature sensor function meets the basic requirements and other relevant provisions of the Directive 2014/53/EU.
A detailed RED Declaration of Conformity can be found online at www.bosch-home.com/de on the product page for appliance in the additional documents.

The logos and the Bluetooth® brand are registered trademarks and property of Bluetooth SIG, Inc. These trademarks are used by Robert Bosch Hausgeräte GmbH under licence. All other trademarks and brand names are owned by the respective companies.
Childproof lock

You can use the childproof lock to prevent children from switching on the hob.

Activating and deactivating the childproof lock

The hob must be switched off.

To activate:
1. Switch on the hob using the main switch.
2. Touch the symbol for approx. 4 seconds.
   The symbol will be lit for 10 seconds.
   The hob is now locked.

To deactivate:
1. Switch on the hob using the main switch.
2. Touch the symbol for approx. 4 seconds.
   The lock is now released.

Childproof lock

With this function, the childproof lock automatically activates when a hob is switched off.

Switching on and off
You can find out how to switch the automatic childproof lock on in the "Basic settings" section

Wipe protection

If you wipe over the control panel while the hob is switched on, settings may be altered. To avoid doing this, you can use the hob's "Lock control panel for cleaning" function.

To switch on: Touch the symbol. An audible signal sounds. The control panel is locked for 35 seconds.
You can now wipe over the surface of the control panel without altering any settings.

To deactivate: The control panel will be unlocked once 35 seconds have elapsed. To release the function early, touch the symbol.

Notes
- An audible signal sounds 30 seconds after activation. This indicates that the function is about to finish.
- The cleaning lock does not lock the main switch. The hob can be switched off at any time.

Automatic safety cut-out

If a hotplate operates for an extended period and no settings are changed, the automatic safety shut-off is activated.

The hotplate stops heating, and the residual heat indicator or flash alternately in the hotplate display.

When you touch any symbol, the display switches off. The hotplate can now be set again.

The point at which the safety shut-off becomes active depends on which heat setting has been set (after 1 to 10 hours).
Basic settings

The appliance has various basic settings. You can adapt these to suit your cooking habits.

* Factory settings

3. Touching the symbol again takes you to the basic settings. c 1 and 0 light up as a preset in the displays.

4. Touch the symbol repeatedly until the required function is displayed.
5. Then select the required setting from the settings area.

6. Touch the symbol for at least four seconds.

The settings have been saved.

**Leaving the basic settings**

Turn off the hob with the main switch.

---

**Energy consumption indicator**

This function indicates the total amount of energy consumed by this hob the last time it was used for cooking.

Once switched off, the energy consumption in kWh is displayed for 10 seconds.

The picture shows an example with an energy consumption of 1.08 kWh.

You can find out how to switch this function on in the section on "Basic settings"
Cookware check

This function can be used to check the speed and quality of the cooking process depending on the cookware.

The result is a reference value and depends on the properties of the cookware and the hotplate being used.

1. With the cookware still cold, fill it with approx. 200 ml of water and place it on the centre of the hotplate with the diameter that most closely matches that of the base of the cookware.
2. Go to the basic settings and select the "c 12" setting.
3. Touch the settings range. → will flash on the hotplate display.

The function has now been activated.

After 10 seconds, the result for the quality and speed of the cooking process will appear on the hotplate display.

Check the result using the following table:

<table>
<thead>
<tr>
<th>Result</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>The cookware is not suitable for the hotplate and will therefore not heat up.*</td>
</tr>
<tr>
<td>1</td>
<td>The cookware is taking longer to heat up than expected and the cooking process is not going as well as it should.*</td>
</tr>
<tr>
<td>2</td>
<td>The cookware is heating up correctly and the cooking process is going well.</td>
</tr>
</tbody>
</table>

* If there is a smaller hotplate available, test the cookware again on the smaller hotplate.

To reactivate this function, touch the settings range.

Notes
- The flexible cooking zone only counts as a single hotplate; place no more than one item of cookware on it.
- If the diameter of the hotplate used is much smaller than the diameter of the cookware, only the middle of the cookware can be expected to heat up. This may result in the cooking results not being as good as expected or being less than satisfactory.
- You can find information on this function in the section on "Basic settings".
- You can find information on the type, size and positioning of the cookware in the sections on "Induction cooking" and "Flex Zone".

Cleaning

⚠️ Warning – Risk of burns!
The appliance becomes hot during operation. Allow the appliance to cool down before cleaning.

⚠️ Warning – Risk of burns!
The appliance will become hot during operation. If hot liquids penetrate the appliance, leave the appliance to cool for at least two hours before removing the filter cover, the metal grease filter, the container, the overflow reservoir or the appliance housing.

⚠️ Warning – Risk of electric shock!
Do not use any high-pressure cleaners or steam cleaners, which can result in an electric shock.

⚠️ Warning – Risk of electric shock!
Penetrating moisture may result in an electric shock. Clean the appliance using a damp cloth only. Before cleaning, pull out the mains plug or switch off the circuit breaker in the fuse box.

⚠️ Warning – Risk of injury!
Components inside the appliance may have sharp edges. Wear protective gloves.

Note: Only use a minimal amount of water when cleaning so that no water enters the appliance.

Notes
- Before cleaning the appliance, remove any jewellery you are wearing on your arms and hands.
- Do not use any cleaning agents while the hob is still hot. This may mark the surface. Ensure that any residue left by cleaning agents is removed.

Cleaning agents

Only use cleaning products that are suitable for this type of hob. Follow the manufacturer's instructions on the product packaging.

Follow all instructions and warnings included with the cleaning products.

Suitable maintenance and cleaning products can be purchased from the after-sales service or in our e-Shop.

Caution!

Beware of causing surface damage
Do not use:
- Undiluted washing-up liquid
- Cleaning products designed for dishwashers
- Abrasive cleaning products
- Pressure washers or steam jet cleaners
- Oven cleaners
- Corrosive or aggressive cleaners, or those containing chlorine
- Cleaners containing a large percentage of alcohol
- Hard, scratchy sponges, brushes or scouring pads

Caution!

Beware of causing surface damage
Always wash new sponge cloths thoroughly before use.
To ensure that the different surfaces are not damaged by using the wrong cleaning product, follow the instructions in the table.

</tbody>
</table>

### Components to clean

#### Hob surround (only on appliances with hob surrounds)

To prevent damage to the hob surround, observe the following instructions:

- Only use warm soapy water
- Wash new dish cloths thoroughly before use.
- Do not use harsh or abrasive cleaning agents.
- Do not use a glass scraper or sharp objects.

#### Hob

Clean the hob each time you use it. This will prevent food remnants from becoming burned on. Do not clean the hob until the residual heat indicator has gone out. Remove boiled-over liquids immediately and do not allow any food remains to dry on.

Clean the hob with a damp dish cloth and dry it with a cloth or towel to prevent limescale build-up.
Stubborn dirt is best removed with a glass scraper or glass ceramic cleaner (available from retailers). Follow the manufacturer's instructions.

You can obtain a suitable glass scraper (article no. 00087670) from our after-sales service or through our online shop.

Using a special sponge for cleaning glass-ceramic hobs achieves great cleaning results.

**Ventilation system**

The filter must be regularly cleaned or replaced in order to guarantee efficient filtration of odours and grease.

**Metal grease filter**

The metal grease filters should be cleaned every 30 operating hours or at least once a month.

⚠️ **Warning – Risk of fire!**

Grease deposits in the grease filter may catch fire. **Clean the grease filter at least once a month.** Never operate the appliance without the grease filter.

**Activated charcoal filters**

The activated charcoal filter should be replaced regularly. The saturation indicator on your appliance will tell you how frequently this needs to be done.

**Saturation display**

If the metal grease filter or activated charcoal filter becomes saturated, a signal will sound once the appliance has been switched off.

The following symbols will light up in the display panel:

- **Metal grease filter:** \( F \) \( \uparrow \) lights up
- **Activated charcoal filter:** \( F \) \( \downarrow \) lights up
- **Metal grease filter and activated charcoal filter:** \( F \) \( \uparrow \) \( \downarrow \) lights up alternately

Do not wait any longer to clean the metal grease filter or replace the activated charcoal filter.

Once you have cleaned or replaced the relevant filters, reset the saturation indicator so that the \( F \) \( \uparrow \) \( \downarrow \) indicators go out.

After the appliance has been switched off, \( F \) \( \uparrow \) \( \downarrow \) lights up.

1. Touch the \( \downarrow \) symbol.
   A signal tone will sound. The metal grease filter saturation indicator has now been reset.

2. If \( F \) \( \uparrow \) \( \downarrow \) lights up, touch the \( \downarrow \) symbol again.
   A signal tone will sound. The activated charcoal filter saturation indicator has now been reset.

**Changing the activated charcoal filter (only in circulating-air mode)**

Activated charcoal filters trap the odour-causing compounds in cooking smells. They are only used for circulating-air mode.

**Notes**

- The activated charcoal filter is not included with the appliance. The activated charcoal filter (article no. HEZ381700) is available from specialist retailers, from our after-sales service or from our online shop.
- The activated charcoal filter cannot be cleaned or reactivated.
- Only use genuine replacement filters. This will ensure that the appliance performs optimally.

1. Unlock all of the closing elements on the drawer in the flat duct of the fitted unit.

2. Open the drawer in the flat duct and remove the activated charcoal filter.

3. Insert the new activated charcoal filter.

4. Close the drawer in the flat duct and lock all of the closing elements.

**Note:** Make sure that all of the closing elements have been locked correctly. Otherwise noises may be generated and the power of the ventilation system may be reduced.
Removing metal grease filter
The metal grease filters filter the grease out of kitchen steam. To keep them in good working order, the filters should be cleaned at least once a month.

1. Take the filter cover off.

   Note: Make sure that the filter cover does not fall and damage the hob.

2. Take the metal grease filter and the container out.

   Note: Fat may accumulate in the bottom of the container. Hold the metal grease filter level to prevent fat from dripping out.

3. Press down on the two catches on either side of the container to separate the metal grease filter from the container.

4. Empty the container if necessary.

5. Clean the metal grease filter and filter cover.

6. After removing the metal grease filter, clean the inside of the appliance.

   Note: Droplets of water may form on the fan wheel. This is normal and occurs as a result of the cooking vapours condensing. It is not a safety hazard and there is no risk of damage. The electronic components in the appliance are protected.

Cleaning the metal mesh grease filters

Notes
- Do not use aggressive, acidic or alkaline cleaning products.
- The metal grease filter can be cleaned in the dishwasher or by hand.

By hand:

   Note: You can use a special degreaser to remove stubborn dirt (article no. 00311297). This can be ordered through our online shop.

   - Soak the metal grease filter in hot soapy water.
   - Clean the metal grease filter with a brush and then rinse it thoroughly.
   - Leave the metal grease filter to drain.

In the dishwasher:

   - Do not clean the metal grease filter together with cookware if heavily soiled.
   - Place the metal grease filter in the dishwasher, leaving plenty of space around it. Do not trap the metal grease filter.
   - For best results, place the metal grease filter in the dishwasher filter side down.

Fitting and cleaning other appliance components

Also clean the inside of the hob extractor system regularly. You can use a special degreaser to remove stubborn dirt (article no. 00311297).

1. Remove the filter cover and clean it with a damp cloth.

2. Remove the metal grease filter and container.

3. Press down on the two catches on either side of the container to separate the metal grease filter from the container.

4. Empty the container if necessary.

5. Clean the metal grease filter and the container in the dishwasher.
6. If required, take off the housing cover underneath the appliance and clean it.

7. Clean the parts and dry them before refitting them.

Inserting the metal grease filters

1. Insert the container.
2. Insert the metal grease filter.
   Note: Ensure that the metal grease filter has been inserted correctly. Otherwise, the ventilation system does not work.
3. Put the filter cover on.

Resetting the saturation displays

Once you have cleaned or replaced the relevant filters, reset the saturation indicator so that the ‘‘ and ‘’ indicators go out.

After the appliance has been switched off, ‘’ or ‘’ lights up.

1. Touch the symbol.
   A signal tone will sound. The metal grease filter saturation indicator has now been reset.
2. If ‘’ lights up, touch the symbol again.
   A signal tone will sound. The activated charcoal filter saturation indicator has now been reset.

Cleaning the overflow container

Notes
- Make sure that the supply to the overflow container is not blocked. Remove any objects that have entered the appliance once it has cooled down. To do this, take the filter cover off and take the metal grease filter and the container out.
- Any liquid entering the appliance from above will be collected in the overflow container. Unscrew the overflow container and empty it. Take the housing cover off if necessary.

1. Unscrew the overflow container with both hands.
   Notes
   - Hold the overflow container level to prevent liquid from leaking out.
   - If the metal grease filter and the container have been removed and liquid finds its way into the appliance through the fan grille, you will need to remove the housing cover.

2. Empty the overflow container, as well as the housing cover if necessary, and rinse it/them out.
3. Clean the overflow container before screwing it back into place.
4. Refit the housing cover.

Wireless temperature sensor

Temperature sensor
Clean the temperature sensor with a damp cloth. Never clean it in the dishwasher. Do not immerse it in water or clean it under running water.

Remove the temperature sensor from the saucepan after cooking. Store it in a clean, safe place (such as in its packaging) away from sources of heat.

Silicone patch
Clean and dry before attaching to the temperature sensor. Dishwasher safe.

Note: Cookware with the silicone patch must not be left to soak for long periods in soapy water.

Temperature sensor window
The sensor window must always be clean and dry. Proceed as follows:
- Remove dirt and oil splatters regularly.
- Use a soft cloth or cotton buds and window cleaner for cleaning.

Notes
- Do not use abrasive cleaning agents such as scouring pads, scrubbing brushes or cream cleaners.
- Do not touch the sensor window with your fingers. This may make it dirty or scratch it.
**Frequently Asked Questions (FAQ)**

### Using the appliance

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Why can't I switch on the hob and why is the childproof lock symbol lit?</td>
<td>The childproof lock is activated. You can find information on this function in the section on &quot;Childproof lock&quot;.</td>
</tr>
<tr>
<td>Why are the displays flashing and why can I hear an audible signal?</td>
<td>Remove any liquid or food remains from the control panel. Remove any objects from the control panel. You can find instructions on how to deactivate the audible signal in the section on &quot;Basic settings&quot;.</td>
</tr>
</tbody>
</table>

### Noises

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Why I can hear noises while I'm cooking?</td>
<td>Noises may be generated while using the hob depending on the base material of the cookware. These noises are a normal part of induction technology. They do not indicate a defect.</td>
</tr>
</tbody>
</table>

**Possible noises:**

- **A low humming noise like the one a transformer makes:**
  Occurs when cooking at a high heat setting. The noise disappears or becomes quieter when the heat setting is reduced.

- **Low whistling noise:**
  Occurs when the cookware is empty. This noise disappears when water or food is added to the cookware.

- **Crackling:**
  Occurs when using cookware made from different layers of material or when using cookware of different sizes and different materials at the same time. The loudness of the noise can vary depending on the quantity of food being cooked or the cooking method.

- **High-pitched whistling noises:**
  Can occur when two hotplates are used at the highest heat setting at the same time. The whistling noises disappear or become quieter when the heat setting is reduced.

- **Fan noise:**
  The hob is equipped with a fan that switches on automatically at high temperatures. The fan may continue to run even after you have switched off the hob if the temperature detected is still too high.

### Cookware

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Which types of cookware can be used with an induction hob?</td>
<td>You can find information on which types of cookware can be used with an induction hob in the section on &quot;Induction cooking&quot;.</td>
</tr>
<tr>
<td>Why is the hotplate not heating up and why is the heat setting flashing?</td>
<td>The hotplate on which the cookware is standing is not switched on. Check that you have switched on the correct hotplate. The cookware is too small for the hotplate that is switched on or it is not suitable for induction cooking. Check that the cookware is suitable for induction cooking and that it is placed on the hotplate that best corresponds to its size. You can find information on the type, size and positioning of cookware in the sections on &quot;Induction cooking&quot;, &quot;Flex Zone&quot; and &quot;Move function&quot;.</td>
</tr>
<tr>
<td>Why is it taking so long for the cookware to heat up or why is it not heating up sufficiently despite being on a high heat setting?</td>
<td>The cookware is too small for the hotplate that is switched on or it is not suitable for induction cooking. Check that the cookware is suitable for induction cooking and that it is placed on the hotplate that best corresponds to its size. You can find information on the type, size and positioning of cookware in the sections on &quot;Induction cooking&quot;, &quot;Flex Zone&quot; and &quot;Move function&quot;.</td>
</tr>
</tbody>
</table>
Cleaning

How do I clean the hob?

Using a special glass-ceramic cleaning agent produces the best results. We advise against using harsh or abrasive cleaning agents, dishwater detergent (concentrated) or scouring pads.

You can find more information on cleaning and caring for your hob in the section on "Cleaning"
# Trouble shooting

Trouble shooting is usually a small matter that is easy to eliminate. Please read the information in the table before calling the after-sales service.

</table>

**Notes**
- If " appears on the display, press and hold the button for the relevant cooking zone in order to read the fault code.
- If the fault code is not listed in the table, disconnect the hob from the mains power supply and wait 30 seconds before reconnecting it. If this code is displayed again, contact the technical after-sales service and specify which fault code has appeared.
- If a fault occurs, the appliance will not switch to standby mode.

**Do not place hot pans on the control panel.**
Customer service

Our after-sales service is there for you if your appliance needs to be repaired. We will always find an appropriate solution, also in order to avoid after-sales personnel having to make unnecessary visits.

E number and FD number

Please quote the E-number (product number) and the FD number (production number) of your appliance when contacting our after-sales service.

The rating plate bearing these numbers can be found:

- On the appliance certificate.
- On the underside of the hob.

The E number can also be found on the hob's glass ceramic surface. You can check the after-sales service index (KI) and FD number by going to the basic settings. Refer to the section entitled "Basic settings" to find out how to do this.

Please note that a visit from an after-sales service engineer is not free of charge in the event that the appliance has been misused, even during the warranty period.

Please find the contact data of all countries in the enclosed customer service list.

To book an engineer visit and product advice

GB 0344 892 8979
Calls charged at local or mobile rate.

IE 01450 2655
0.03 € per minute at peak. Off peak 0.0088 € per minute.

Rely on the professionalism of the manufacturer. You can therefore be sure that the repair is carried out by trained service technicians who carry original spare parts for your appliances.
**Test dishes**

This table has been produced for test institutes to facilitate the testing of our appliances.

The data in the table refers to our Schulte-Ufer cookware accessories (4 piece cookware set for the HEZ 390042 induction hob) with the following measurements:

- Saucepan Ø 16 cm, 1.2 l for hotplates of Ø 14.5 cm
- Pot Ø 16 cm, 1.7 l for hotplates of Ø 14.5 cm
- Pot Ø 22 cm, 4.2 l for hotplates of Ø 18 cm
- Frying pan Ø 24 cm, for hotplates of Ø 18 cm

## Test dishes

### Cooking rice pudding

Rice pudding, cooked with the lid on

**Temperature of the milk:** 7 ºC

Heat the milk until it starts to rise up. Set the recommended heat setting and add rice, sugar and salt to the milk.

The cooking time, including preheating, is approx. 45 minutes.

| Ingredients: 190 g short-grain rice, 90 g sugar, 750 ml milk (3.5% fat content) and 1 g salt | Cooking pot, 16 cm diameter | 8.5 | Approx. 5:30 | No | 3 (stir after 10 minutes) | Yes |
| Ingredients: 250 g short-grain rice, 120 g sugar, 1 l milk (3.5% fat content) and 1.5 g salt | Saucepan, 22 cm diameter | 8.5 | Approx. 5:30 | No | 3 (stir after 10 minutes) | Yes |

Rice pudding, cooked without lid

**Temperature of the milk:** 7 ºC

Add the ingredients to the milk and heat the mixture up while stirring continuously. Once the milk has reached approx. 90 ºC, select the recommended heat setting and leave it to simmer on a low heat for approx. 50 minutes.

| Ingredients: 190 g short-grain rice, 90 g sugar, 750 ml milk (3.5% fat content) and 1 g salt | Cooking pot, 16 cm diameter | 8.5 | Approx. 5:30 | No | 3 | No |
| Ingredients: 250 g short-grain rice, 120 g sugar, 1 l milk (3.5% fat content) and 1.5 g salt | Saucepan, 22 cm diameter | 8.5 | Approx. 5:30 | No | 2.5 | No |

### Cooking rice*

**Water temperature:** 20 ºC

| Ingredients: 125 g long grain rice, 300 g water and a pinch of salt | Cooking pot, 16 cm diameter | 9 | Approx. 2:30 | Yes | 2 | Yes |
| Ingredients: 250 g long grain rice, 600 g water and a pinch of salt | Saucepan, 22 cm diameter | 9 | Approx. 2:30 | Yes | 2.5 | Yes |

### Roasting a pork loin

**Initial temperature of the loin:** 7 ºC

| Amount: 3 pork loins (total weight approx. 300 g, 1 cm thick) and 15 ml sunflower oil | Frying pan, 24 cm diameter | 9 | Approx. 1:30 | No | 7 | No |

### Preparing pancakes**

| Amount: 55 ml batter for each pancake | Frying pan, 24 cm diameter | 9 | Approx. 1:30 | No | 7 | No |

### Deep-fat frying chips

| Amount: 2 l sunflower oil, per portion: 200 g frozen chips (e.g. McCain 123 Original fries) | Saucepan, 22 cm diameter | 9 | Until the oil temperature reaches 180 ºC | No | 9 | No |
