

# LAVAZZA Milk Frother User Guide

1. Select the correct whisk for the drink you want to prepare:

Cappuccino

Caffe Latte  
(both discs with smooth disc on bottom)

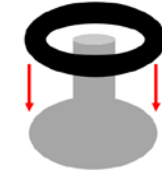

2. Insert whisk as shown and add cold milk to the corresponding line level in the metal jug:

Caffe Latte  
(top line)

Cappuccino  
(bottom line)

Ensure that the whisk is the correct way round so that you feel the magnet pull the disc to the base of the jug

3. Place the metal jug into the frother, put the lid on and press the power button.

For the cold frothing option, press and hold the power button until it beeps.

4. When frothing is complete you will hear a beep. Remove the jug & lid and pour on to your prepared coffee. Serve immediately and enjoy!

Note: Always store the frother attachments as shown so they do not get lost.

Please note that the frother is very quiet when active.
